To learn why Richard Nixon was really blown out of the White House, you could begin with the infamous Nazi chemical/pharmaceutical cartel, IG Farben. The cartel that pushed Hitler over the top into power in Germany.

One of its lasting legacies is the multinational corporation expanded to titanic proportions. Farben didn't just buy smaller companies, it forged favorable agreements with huge corporations all over the world: Standard Oil (Rockefeller); Rhone-Poulenc; Imperial Chemical Industries; Du Pont; Dow.

During World War 2, Josiah Du Bois, representing the US federal government, was sent on a fact-finding mission to Guatemala. His comment: "As far as I can tell the country is a wholly owned subsidiary of Farben."

What Farben stood for was an attempt to remake the planet in terms of power.

Farben held important cards. It employed brilliant chemists who, in some ways, were far ahead of its competitors. Farben was all about synthetics. Rubber, oil, dyes, pharmaceuticals.

Farben saw itself as a modern version of the old alchemists. Transforming one substance into another. It came to believe that, with enough time, it would be able to make anything from anything. It envisioned labs in which basic chemical facts would be changed so that, in practice, elements would be virtually interchangeable.

This paralleled the Nazi obsession to discover the lost secrets of the mythical Aryan race and then reconstitute it with selective breeding, genetic engineering, and of course the mass murder of "lesser peoples."

On one level, there was the idea of chemical transformations, and on another level, the transformation of the human species.
